

Water Ionizers Part 5
by Cathleen LoGrasso

0:02

Water that comes out of your tap usually has about

0:08

three or four hundred

0:10

on the ORP

0:11

and what that means is

0:14

that

0:16

instead of having anti-oxidant qualities it has the opposite
of that which is it

0:21

tends to oxidate

0:23

or damage cells.

0:25

Yeah, some of the people might not know that if you cut
an apple open and it turns brown, that's oxidation

0:35

It happens all the time in cells where you have oxidation

0:41

...that's just part of the cell processes.

0:44

But you do need to have

0:47

anti-oxidants to balance that off, otherwise you can have

0:52

cells actually be damaged

0:55

...mutated, or turn into cancers and things like that.

1:01

A lot of research has been done that.

1:03

Yeah, there's a lot of projective qualities about the

1:07

water machines... like this one here behind us.

1:10

Right, when I tested the water coming out at a medium level of alkalinity

1:17

it was almost three hundred... negative

1:22

which ... good and that's the antioxidant value

1:27

and that just means a lot of negative ...electrons

1:32

so they can neutralize those free radicals.

1:40

Yeah, instead of damaging your cells they ...actually can reverse the damage.

2:02

There is an experiment that I am going to put on the website showing that.

2:07

...so look for that.

2:16

Actually a lot of people feel

2:24

that the negative ORP, or the antioxidant

2:28

qualities of ionized water is even more important than the

2:32

high ph of the ionized water.

2:33

Well, that's definitely a great benefit.

2:38

Yeah.

2:40

...for you and your family.

2:42

yeah exactly

2:44

So, anyway we were

2:48

kind of talking about what's bad with the bottled water
and we said it's got

2:55

a lot of times acidic water in there,

2:58

or very low in the neutral range.

3:01

Acidic would be six. Yeah.

3:03

Neutral would be seven.

3:06

And you know a lot of times you'll see this bottle of water
coming out at six point eighty, six point five... which is
acidic.

3:13

Right we won't mention names, but I know there is one
for sure that was acidic.

3:17

Don't mention names they're all like that...No, if you get bottled water and it's truly mountain spring, not the valley spring...

3:32

but the upper

3:35

higher altitude mountain spring water...a lot of times that will be like a nice seven point four.

3:42

Yeah, but you don't really get in bottled water very often...Mm, hmm... you have to pay a lot

3:50

of extra money for that, and then even then with that higher alkaline...which seven point four is just neutral range...I wouldn't call that hotline

4:04

Well there's the cost again. If you're gonna pay for bottled water ...since we've had five kids, we've had to balance a budget for many years

4:14

Now we have a grandson, so most of our kids are grown but buying bottled water would have been an expense that...

4:24

you know i wouldn't have been able to

4:27

fit it in to the budget, really, much and the benefits not only weren't there, but the cost was high. With the Microlite machine, just with this machine here...

4:38

the cost is so small.

4:41

...if you're looking at a ten ...I'm sure that this machine will at least last ten years. Ours

4:50

which was

4:51

an older model lasted...

Oh, yeah. I'm sure this machine will last 20 years.

There's nothing to go wrong.

4:57

But, if you just figured 10 years the cost is...it's an \$875. machine...it's so small ...it's

5:09

...Like...Why buy bottled water? It doesn't make any sense.

5:13

Plus...at Alkaline Water Plus we have a great financing

5:19

available so you don't have to come up with the whole chunk at once if you can't afford it.

5:21

True. If you want to do it that way. That's all on the website, so just check out the website.
