

# Ionized Water: Cures Athlete's Foot

## Video Transcript

Water, electrolyzed into alkaline and acidic has proven to be effective in many ways.

In our series featuring this so-called miracle water, we look at how ionized water has been used in the medical field.

Athlete's Foot is a nasty fungal disease and painful condition. It is very difficult to cure. Many people suffer from athlete's foot after wearing shoes for long periods of time.

But athlete's foot can be cured by just water.

Do you believe that it is just water that is used in this treatment?

No, I don't believe it.

Do you feel any pain in the infected part?

No I don't. If this cures it I will tell others about this.

This is Kyowa Hospital in Tokyo. At the hospital athlete's foot, hands and bedsores are treated only with water.

The doctor says that, unless there is infection the troubled part will heal completely.

It is necessary just to irrigate and apply a bandage.

The treatment of this injury, caused in a motorcycle accident, was just dipping it in ionized water for fifteen minutes.

Do you think the water was actually a disinfectant solution?

Yes, I thought it was a disinfectant solution at first, but later I learned that it was just acidic water.

How did you feel about that?

Well, I doubted it would heal the injury.

Don't worry, the water has an excellent sterilizing effect.

The electrolysis of tap water produces alkaline water at the cathode and acid water at the anode.

We are using the acid water after watering it down to a pH value of 2.6.

This high acid water kills fungus, mold and bacteria although perhaps that may seem hard to believe.

You can see at how the bacteria actually died using this laser color microscope, the first to be developed in the world.

The bacteria you see moving here is spirilla bacteria which is similar to a bacteria that causes syphilis. Acid water is poured over it, and as soon as the water covers the bacteria, they stop moving immediately.

Bacteria, such as spirilla and many others, can only survive in an environment with a pH value of between 3 and 4.

With strong acid water that has a pH value of 2.6, they don't stand a chance.

The oxidation reduction potential [ORP] chlorine and oxygen also help kill these bacteria.

We don't use antiseptics, we only use ionized acidic water. Just water...That's all.

One of the patients allowed us to take pictures of one of his bedsores and how it has healed.

It worked right down to the bone.

Bedsores even this bad are healed by only ionized water, it works better than any medicine.

Electrolyzed acid water works well, especially for bedsores.

We visited Akashi Hospital to look at some of the promising results.

We only used electrolyzed water for treatment, no ointment, disinfectant or intravenous drip. There's been no infection now for two weeks.

The recovery from these bedsores has been extremely good. It is very surprising. It is amazing.

While making the report in the hospital, this reporter was told that after giving patients alkaline ionized water, the patient's feces became odorless.

There was no fecal odor at all in the sick rooms for patients, despite the fact that many patients were wearing paper diapers.

The patient recovery rate was in fact so rapid that more and more patients are getting around in wheel chairs.

Because of the drastic improvements at the hospital, even doctors and nurses are now taking the alkaline ionized water home and drinking it themselves.

Our reporter went back to Kyowa Hospital to find out more advantages of alkaline water.

We boil alkaline water to use it for making babies' milk.

All the employees here usually drink tea made from boiled alkaline water.

I hear you don't catch colds.

No, everyone here is fine because they all drink alkaline water.

In this hospital there is a machine from which patients can drink alkaline water which was installed seven years ago.

There are people here to claim to have cured their sclerosis of the liver or diabetes, which are very hard to treat with western medicines, simply by drinking electrolyzed alkaline ionized water.

This is Katsumi Nakanishi, who recovered from sclerosis of the liver. I drank a lot of water as I had a bad liver, and it was always burning. My numbers went down and down. I am well now.

Shigeru Takahashi, who recovered from diabetes, said: "I could not believe that the water could cure my disease in the beginning." I had been suffering from diabetes for fourteen years, but with the ionized water, I cured it.

What happens inside the body?

We interviewed a doctor who teaches the effective use of this water on the body, the chief editor of the Water Society, Dr. Hidemitsu Hayashi.

You will have clean feces if you drink alkaline ionized water. Electrolysis has the function of detoxifying or neutralizing toxic substances, such as hydrogen sulfide and ammonia, contained in the feces.

The toxic substances will start to decrease as you drink the ionized water, and you will have a healthier liver, the organ which has the function of neutralizing toxic substances in the body. And, then your whole body will start to feel better since the functions of all the organs in the entire body start to improve.

Numerous diseases, including high blood pressure, stomach ulcers and duodenal ulcers improve as a result of using this water. It is amazing that it has so many incredible results. Surprising effects.

According to our camera-man, Matsumoto, the patients we saw at the beginning, the one with Athlete's feet, was cured in two weeks, and the one who had motorcycle accident was healed in three weeks. It is really amazing.
